

METHOD AND ARTICLE FOR DECORATING MODEL RACING CARS

ABSTRACT OF THE DISCLOSURE

A Method and Article for Decorating a Model Racing Car is disclosed. The article comprises a sheet holding a transferable design and comprising a film layer with a printed design which is sized to cover substantially the entire body of a model racing car. The layer of pigmented adhesive covers one side of said film and a release sheet is adhered to this pigmented adhesive layer. A water absorbent sheet covers the side of the film opposite the above-referenced adhesive layer and includes a water soluble adhesive layer which adheres to the design carrying film. The method includes removing the release sheet to expose the pigmented adhesive layer which is then placed over the car body. A quantity of water sufficient to dissolve the adhesive on the back side of the water absorbent sheet is then applied so that this sheet can also be removed. The design carrying film is then conformed to the shape of the model racing car and excess material is trimmed away using a knife.
